

IDEATION PHASE

Brainstorm & Idea Prioritization Template

Date **May 5th 2026**

Team ID *(Enter Your Team ID)*

Project Name **Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits**

Maximum Marks **4 Marks**

Objective

The ideation phase was conducted to identify a meaningful real-world problem related to the food delivery industry and to explore potential analytical solutions. The team brainstormed several ideas, evaluated their feasibility, availability of datasets, business relevance, and analytical scope before selecting the final project topic.

Step 1: Team Gathering and Collaboration

The project team conducted a brainstorming session where each member proposed ideas based on current trends in data analytics and business intelligence. The discussion focused on solving practical business problems using Tableau dashboards and data visualization techniques.

Ideas Generated During Brainstorming

S.No	Proposed Idea	Advantages	Challenges	Priority
1	Food Ordering Behaviour Analysis	High business relevance, rich dataset availability, multiple visualization opportunities	Requires extensive data cleaning	High
2	Online Shopping Customer Analysis	Popular topic with customer segmentation	Similar projects already exist	Medium
3	Hospital Patient Analytics	Useful healthcare insights	Data privacy concerns	Medium
4	Banking Loan Approval Analysis	Financial decision support	Limited public datasets	Medium

S.No	Proposed Idea	Advantages	Challenges	Priority
5	Movie Recommendation Analytics	Interesting visualizations	Less business impact	Low

Final Selected Idea

After evaluating all proposed ideas, the team selected:

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

Reasons for Selection

- Availability of a large real-world dataset.
- Supports meaningful customer behaviour analysis.
- Enables interactive Tableau dashboard development.
- Covers multiple business KPIs and performance metrics.
- Helps restaurants and food delivery platforms make data-driven decisions.
- Offers opportunities for advanced visualizations and storytelling.

Define the Problem Statement

Date	5 May 2026
Team ID	(Enter Your Team ID)
Project Name	Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits
Maximum Marks	2 Marks

Customer Problem Statement

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A restaurant owner	Understand customer	I don't know which cuisines and	Customer preferences change	Unsure about business decisions and

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
		ordering patterns	meal types are most popular	frequently across cities and demographics	menu planning
PS-2	A food delivery platform manager	Improve customer satisfaction and delivery efficiency	I lack clear insights into customer ratings, delivery times, and ordering trends	Data is scattered and difficult to interpret	Challenged in improving service quality and customer experience

Final Problem Statement

Food delivery businesses generate large volumes of customer ordering data every day. However, without proper analysis, it becomes difficult to understand customer preferences, ordering behavior, revenue contribution, meal demand, city-wise trends, and delivery performance. This limits the ability of restaurants and delivery platforms to make informed business decisions. Therefore, an interactive Tableau-based analytical dashboard is required to transform raw ordering data into meaningful insights that support strategic planning and operational improvements.

Empathize & Discover

Empathy Map Canvas

User Persona

Primary User: Restaurant Owners, Food Delivery Managers, Business Analysts

Says

- "Which cuisine is ordered the most?"
- "Which city generates the highest number of orders?"
- "How satisfied are customers?"
- "Which meal contributes the highest revenue?"
- "How can we improve delivery performance?"

Thinks

- Need better business decisions based on customer behavior.
- Customer satisfaction is important for business growth.
- Delivery efficiency affects repeat customers.
- Revenue can be increased by understanding ordering patterns.
- Different cities may have different customer preferences.

Does

- Reviews sales reports.
- Tracks customer ratings.
- Monitors delivery times.
- Evaluates restaurant performance.
- Plans promotional offers.
- Analyzes customer trends.

Feels

- Overwhelmed by large volumes of raw data.
- Concerned about declining customer satisfaction.
- Curious about hidden customer behavior patterns.

- Motivated to improve business performance.
- Needs a simple and interactive reporting solution.

Customer Goals

- Identify popular cuisines and meal types.
- Understand customer demographics.
- Improve delivery efficiency.
- Increase customer satisfaction.
- Boost restaurant revenue.
- Make informed business decisions using data.

Customer Pain Points

- Lack of centralized business insights.
- Difficulty interpreting raw datasets.
- Inability to identify customer trends quickly.
- Limited understanding of city-wise demand.
- Poor visibility into revenue distribution.
- Manual report preparation consumes time.

Proposed Solution

Develop an interactive Tableau dashboard that analyses food ordering behaviour using multiple visualizations such as KPI cards, bar charts, line charts, tree maps, donut charts, heat maps, and bubble charts. The dashboard enables stakeholders to monitor customer preferences, revenue contribution, order distribution, cuisine demand, delivery performance, and customer satisfaction in one place. Tableau Stories further present the analysis as a structured narrative, helping decision-makers derive actionable insights efficiently.

Expected Outcomes

- Better understanding of customer ordering behaviour.

- Identification of high-demand cuisines and meal types.
- Improved business decision-making.
- Enhanced customer satisfaction through data-driven improvements.
- Faster access to meaningful insights using interactive dashboards.
- Improved operational efficiency and revenue optimization.

Conclusion

The ideation phase helped identify a significant business problem in the food delivery domain and establish a clear analytical direction for the project. Through brainstorming, customer problem identification, and empathy mapping, the team gained a deeper understanding of stakeholder needs and designed a data-driven solution using Tableau dashboards and storytelling techniques to address real-world business challenges.
